

# NEW Clear Spray Peel™

## Spray-On, Peel Off Protective Coating

*Fresh application of Clear Spray Peel, beginning to cure.*

### Spray-On Surface Protection

Clear Spray Peel is a revolutionary, new, temporary, protective coating for almost any non-porous surface. Clear Spray Peel coats complex

shapes, vertical and overhead surfaces, and sticks tight until you peel it off. It locks out water, providing a rust-inhibiting seal over iron and steel. It protects surface finishes of products, parts and spaces from scratches, debris, liquids, oils, paint - nearly anything you name. When you want it off, just peel it off. Clear Spray Peel pulls away in sheets, without leaving a trace on the protected surface.

### Easy to Use

If you can pull a trigger, you can effectively apply Clear Spray Peel. Goes on with a standard primer spray gun or with a housepainter's airless spray gun. Be sure to mask surfaces you don't want to coat.

Clear Spray Peel is water-based, so it's easy to use, easy to clean up and friendly to the environment. There is no strong odor and no flash point. Always see our data sheets for complete details.

### See-Through Visibility

After drying (about 30 minutes per coat) Clear Spray Peel dries to a clear coat, so you can see labels, nameplates, serial numbers, safety and operating

instructions, service company phone numbers, gauges, instrumentation, colors, shapes, even textures. Far more convenient than opaque covers, tarps or containers.

### Clear Spray Peel is Great for Protecting:

- Vehicles on the road or in storage - cars, trucks, trailers, RVs, motorcycles
- Race cars - great for hobbyist
- Equipment and machinery
- Construction and material handling equipment
- Parts and components in process, transportation or storage
- Work surfaces, paint booths
- Walls, windows, fixtures, signs
- Metal, plastic, glass, ceramic
- Sealed or painted wood, brick, concrete
- Virtually any sound, non-porous surface
- Surfaces against graffiti

### Durable, 'til it's Time To Go

A Clear Spray Peel application can last for months. Two coats are recommended for most applications. You might choose to use more if you're operating in desert conditions, other extreme environments, or protecting a museum-quality asset. Users have driven 30,000 miles with a Clear Spray Peel coating without failure. You can recoat and touch up areas anytime.

## Convenient Packaging & Environmentally Friendly

Clear Spray Peel is available in 1-quart, 1-gallon, or 5-gallon pail sizes. Coverage varies, but you can protect a good-size vehicle, 2 -3 coats, with a gallon. Clear Spray Peel is water-based, so there are no worries about hurting the environment.

### Preparation

Clean surface with a wax and grease remover. Be sure to mask surfaces that you do not want to coat. Door edge guard is recommended for break lines. Gravity feed paint gun is recommended. Airless sprayer can be used.

### Application & Dry Times

Apply	2 - 3 wet coats
Fluid Tip	1.4 - 2.0 (recommended)
Air Pressure	40 - 50 psi at the gun
Between Coats	15 - 30 minutes
Air Dry	1 hour at 70°F
Force Dry	Unknown
Dry to Topcoat	1 hour at 70°F

**No sanding is needed prior to topcoat application.**

### Repair & Recoat

Can be repaired or recoated after 1 hour at 70°F.

### Clean-Up

Thoroughly clean gun and equipment with water. Do not use lacquer thinner or gun cleaner, product will gel in gun.

### Removal

Any time after 2 hours at 70°F.
